The use of the uromodulin promoter to target production of recombinant proteins into urine of transgenic animals.

Zbikowska HM, Soukhareva N, Behnam R, Chang R, Drews R, Lubon H, Hammond D, Soukharev S.

Plasma Derivative Department, Holland Laboratory, American Red Cross, MD 20855, Rockville, USA.

A uromodulin promoter has been isolated, sequenced, and used to generate two sets of transgenic mice for expression of the lacZ marker gene and for production of the human recombinant erythropoietin (rhEPO) in urine. We demonstrated that the 5.6kb fragment of the uromodulin gene containing the 3.7-kb promoter area and, both the first exon and part of the second exon, were sufficient to provide kidneyspecific expression of the lacZ gene. Histological analysis of the lacZ expression pattern revealed beta-galactosidase activity specifically in the thick limb of Henle's loop. However, due to random integration of the transgene, ectopic expression was detected in some transgenic lines. Analysis of the EPO-transgenic mice showed that rhEPO was secreted into the urine of founder mice (up to 6 ng/ml). We were able to breed and analyze only two sublines with a very low expression level of rhEPO (up to 260 pg/ml). All of our transgenic mice expressing rhEPO in urine developed disease symptoms similar to polycythemia in humans. These included a considerable increase in red blood cell counts, hemoglobin concentration, and hematocrit concomitant with severe thrombocytopenia, all of which were detected in the rhEPO-expressing mice. Although our model did not prove to be beneficial for commercial production of rhEPO, we concluded that the uromodulin promoter could be useful for expression of other important therapeutic proteins into the urine of transgenic animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the partial DNA sequence of the goat uromodulin gene promoter. It is used to construct the nucleic acid constructs of the invention. The specification describes nucleic constructs which comprise a sequence encoding a polypeptide, a construct which comprise a sequence encoding a polypeptide, a promoter from a kidney-specific gene, and leader sequence that enables secretion of the polypeptide by urine-producing cells, into the urine of secretion of the polypeptides, used for production, in the urine of transgenic animals, of polypeptides, particularly antibodies, transgenic animals, of polypeptides, particularly antibodies, heterodimeric fertility hormones, collagen or fibrinogen, but also heterodimeric those that degrade an undesirable component of urine enzymes, e.g. those that degrade an undesirable component

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents the partial DNA sequence of the bovine uromodulin gene promoter. It is used to construct the nucleic acid constructs of the invention. The specification describes nucleic acid constructs which comprise a sequence encoding a polypeptide, a promoter from a kidney-specific gene, and leader sequence that enables secretion of the polypeptide, by urine-producing cells, into the urine. The nucleic acid constructs are used for production, in the urine of transgenic animals, of polypeptides, particularly antibodies, heterodimeric fertility hormones, collagen or fibrinogen, but also enzymes, e.g. those that degrade an undesirable component of urine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid construct containing kidney-specific promoter, useful recombinant production of protein, e.g. antibody, in the urine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 626 BP; 184 A; 147 C; 130 G; 165 T; 0 other;

It is used to construct the nucleic acid constructs of the invention. The specification describes nucleic acid acid constructs which comprise a sequence encoding a polypeptide, a promoter from a kidney-specific gene, and leader sequence that enables secretion of the polypeptide, by urine-producing cells, into the urine. The nucleic acid constructs are used for production, in the urine of transgenic animals, of polypeptides, particularly antibodies, heterodimeric fertility hormones, collagen or fibrinogen, but also enzymes, e.g. those that degrade an undesirable component of urine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   kidney-specific gene; urine-producing cell; urine; transgenic animal; antibody; heterodimeric fertili fibrinogen; enzyme; uromodulin gene promoter; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAA12448 standard;

As New methods to produce heterologous recombinant proteins in urine CC require the use of a DNA molecule which is a kidney-specific require the use of a DNA molecule which is a perably linked to a CC promoter, such as the uromodulin promoter, operably linked to a CC uromodulin promoter expresses the heterologous gene encoding a biologically active protein the CC uromodulin promoter expresses the heterologous gene in vivo in the CC urine. The recombinant proteins produced may be useful for treating CC urine. The major advantages of using this urine-based system CC over milk-based systems are the ability to harvest the product soon CC of the stand throughout the life of the animal irrespective of sex CC over milk-based systems are the ability to harvest the product constitution from CC urine. In addition, livestock urine is a proven, currently utilised CC source of pharmaceuticals.

It is used to construct the nucleic acid constructs of the invention. The specification describes nucleic acid acid constructs which comprise a sequence encoding a polypeptide, a promoter from a kidney-specific gene, and leader sequence that enables secretion of the polypeptide, by urine-producing cells, into the urine. The nucleic acid constructs are used for production, in the urine of transgenic animals, of polypeptides, particularly antibodies, heterodimeric fertility hormones, collagen or fibrinogen, but also enzymes, e.g. those that degrade an undesirable component of urine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid construct containing kidney-specific promoter, useful recombinant production of protein, e.g. antibody, in the urine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   kidney-specific gene; urine-producing cell; urine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytokine; cell proliferation; cell differentiation; vaccine; peptide therapy; stem cell growth factor; haematog tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcrartive bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vaccine; pent's
                                                                                               cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynuclectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammanomodulatory activity and activity, tissue growth factor activity, hammanomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or

                                                                                                       of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADFN, or AFDI and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is useful for the diagnosis or therapy of diseases associated with diagnosis or therapy of diseases associated with congenital heart disease, related to homeobox containing genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related with the development of the brain and limb girdle muscular dystrophy and dwarfism. Oligomers specific to each of the genes are useful for detecting the methylation state of all CpG dinucleotides within the 350 sequences or the amplification of the 350 sequences, (II) and/or their complementary sequences, (II) and/or their complementary and as oligomer problems for detecting the discount of the 350 sequences, (II) and/or their complements and as oligomer problems for detecting the discount of the 350 sequences, (II) and/or their complements and the supplication of the 350 sequences, (II) and/or their complements and the supplication of the 350 sequences, (II) and/or their complements and the supplication of the 350 sequences or the supplication of the supplication supplies the supplication supplies the supplication supplies the supplies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    heart disease; epilepsy; histone deacetylation; muscular dystrophy; dwarfism; single nucleotide polymorphism; SNP; cytosine methylation; antidiabetic; cytostatic; anticonvulsant; ds.

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retrinosis, annemia, cancer, acute myeloid macular degeneration, arteriosclerosis, annemia, cancer, acute myeloid releases, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 17183 BP; 5157 A; 149 C; 3266 G; 8611 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     As The invention relates to identifying metastatic tumour cells comprising CC testing them for hybridisation to at least one cDNA sequence CC testing them for hybridisation to at least one cDNA sequences.

CC testing them for hybridisation to at least one cDNA sequences for metastatic CC testing the complete gene, functional fragments, CC testing the cDNA sequences are markers for metastatic CC potential in breast and pancreatic tumours, useful for diagnosis, for contributing potential agents for treatment of cancer, e.g. antibodies. CC particularly for staging cancers and selection of therapy antibodies. CC identifying potential agents for treatment of cancer, e.g. antibodies. CC against proteins encoded by the cDNA sequences or antisense sequences. CC against proteins encoded by the cDNA sequences allowing its cc functional analysis, including study of metastasis-specific regulatory concerns analysis, including study of metastasis-specific regulatory concerns analysis, including study of metastasis of cc sequences for clarification of molecular regulatory mechanisms of cc metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7622 татсалавальсаласавальстватительналавальна 7581

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-DEC-2000;
                 The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) bases of chemically pretreated DNA of angiogenesis-associated genes (II) bases of chemically pretreated DNA of angiogenesis-associated genes (II) also bases of chemically pretreated to the methylation status and/or having sequences (ABO66971-ABO67178) or their complements. (I), also bases of the methylation status and related to evaluate the methylation status and treatment of eye diseases, proliferative retinopathy, single-nucleotide polymorphisms, in angiogenesis related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, macular degeneration caused by neovascularisation, diabetic retinopathy, macular degeneration bowel diseases, ulcers and diabetic retinopathy, macular degeneration caused by neovascularisation of the composition of the compo
                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid fragments from chemically treated angiogenesis associated genes, useful for determining methylation angiogenesis associated genes treatment of cancer status, e.g. in diagnosis or treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (EPIG-) EPIGENOMICS

                                                                                                                                                                                                                                                                                                                                                                                                                                             07-DEC-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAL11189 standard;
       The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and polypeptides are also useful for isolating compounds with cytostatic polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                Human;

This invention describes a novel method for determining the degree of cc methylation of a particular cytosine in a motif 5'-CpG-3', present in a cc genomic sample of DNA. The sample is treated chemically to convert cc cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one cc member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers cc and the degree of hybridisation to both classes is determined from the CC and the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory constrains etc., particularly by detecting mutations or single nucleotide contrains of calculated of the contrains (SNP's); and (ii) for differentiation of cell or tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                 Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA
This invention describes a novel method for determining the degree methylation of a particular cytosine in a motif 5'-CpG-3', present
                                      Claim 12; 56pp + Sequence Listing;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABQ15589 standard; DNA; 778
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.

The sample is treated chemically to convert cytosine (C) but not methylated C, to uracii, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of ollgonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the rapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously; ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 778 BP; 614 A; 29 C; 24 G;

                                                                                                                    Result
                                                                                                                                                                                                              pred. No. is the number of results predicted by chance to have a pred. No. is the number of the score of the result being printed, score greater than or equal to the score distribution. and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             February 17, 2003, 08:33:57; Search time 2083.49 Seconds (without alignments) updates/sec 12670.391 Million cell updates/sec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazzii, 2990saccharomyces rouxii,
Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
angusta, Debaryomyces hansennii var. hansenii, Pichia sorbitophila,
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
5 kb were prepared and both extremities were sequenced. See
keywords for description of this sequence and for the sequence of
the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAAAAAAAAAAAAAAAAAAAATTTTTTTTAWTAAAWATATWTTAAAAWATTTAAAAWAATTAAAAA 939
